

About Us

eBioSys is a biological software company formed from the synergy of medical and computer scientists with publications in the world's top journals and over 18 years experience in designing, developing and distributing award winning systems in the biological and medical fields.

eBioSys is committed to providing innovative, high quality, cost effective software solutions to the biological sciences.

Try eLab Today!

Download a fully functional trial version of eLab from our website www.ebiosys.com and experience the power of eLab today.

- **Industry leading compliance**
- **Worklist based task assignment**
- **Comprehensive workflow creation and control**
- **Flexible sample management and search**
- **Powerful project management tools**
- **True to life visual representations**
- **Integrated label design and printing**
- **Result and document management**
- **Data backup and restore**
- **Advanced security**

eLab is the powerful, easy to use Laboratory Information Management System (LIMS) that improves sample throughput and reduces IT costs in a single industry compliant solution. eLab empowers your staff to take control of the management of tasks, users, workflows and protocols as well as maintaining sample storage and much more.

Powerful Simplicity

An intuitive streamlined workspace makes eLab easy to use and is supported by a contextually aware menu system. Employing a user interface that works the way you do provides the foundation for better productivity and a more leveraged data environment.

Advanced Project Management

Powerful project management tools allow you to manage projects more efficiently and effectively. Stay informed, control project work, maintain deadlines and make better decisions based on real-time business metrics.

Simple Sample Management

eLab makes it easier to manage your samples. Employ advanced searching capabilities to find samples based on attached meta-data and then sort and view the results the way you want.

Efficient Workflows

eLab workflows assist users in defining how activities are performed and interrelated. The workflow builder graphical interface simplifies the creation of methods and protocols by allowing users to drag and drop appropriate components from the workflow toolbox, set their properties, and link them with constraints. Workflows enforce business rules and improve laboratory practices.

Quality Data

In the world of modern laboratories the focus is on data quality. This is the world for which eLab was designed. We have made substantial investments to better connect users to their data and ensure the highest standards of industry compliance. In short you get more work done for less effort and achieve greater confidence in your results.

Cost Effective

To meet business-critical operational requirements and maintain a competitive advantage laboratories are seeking to implement simpler and easier to manage IT environments that reduce acquisition and support costs while maintaining flexibility to meet changing business needs. eLab is the comprehensive, cost effective solution to laboratory information management.

Regulatory Compliance

A key motivation underlying the creation of eLab was a reduction in the regulatory compliance burden that is increasingly being placed on laboratories. Particular attention has been given to implementing a strict interpretation of the FDA's 21 CFR Part 11 regulation while future-proofing installations against changes in guidelines and levels of enforcement.
